

The Ultimate Time Capture Solution

Many companies generate revenue by billable hours. Inaccurate, incomplete or delayed time capture leads to lost revenue, delayed collections and poor visibility of organizational operations.

Until now there hasn't been a solution that could capture billable activities from multiple sources (including desktop applications, calendar meetings and phone calls), accurately prioritize those actions, and correctly associate them with your project/job codes -- with virtually no manual effort or interruption.

Introducing TimeTracker

TimeTracker is an automated time capture system that frees professionals to focus on their core competencies, instead of trying to recall how they spent their time. By privately capturing how time is spent and automatically generating an accurate timesheet for easy clean-up and submission, *TimeTracker* eliminates the most laborious tasks of preparing a timesheet.

Advantages across departments

Billable professionals: *TimeTracker* is your private time tracking assistant. Working quietly in the background, *TimeTracker* frees you to focus on what you do best.

Finance team: Automated time capture means that all hours are captured accurately and without delay. Faster timesheet submission lets you send invoices sooner, leading to quicker revenue collection.

Project management: Knowing how much time remains on each project helps your team members stay on budget. *TimeTracker* presents this information in real-time.

For creative professionals

Though *TimeTracker* offers exceptional value for attorneys, consultants, software developers and others who must bill for their time, *TimeTracker* offers special advantages for the creative organization because it's integrated directly with the Adobe Creative Suite.

By integrating deeply with Photoshop, Illustrator and InDesign, *TimeTracker* captures information that provide insights and automation that streamline the creative process.
