

TRANSFORM YOUR CUSTOMER EXPERIENCE

The NVPlatform™ enables brands and retailers to easily extend their web/mobile applications to interactive public devices in all their brick-and-mortar locations.

FLEXIBLE

The Android-based NVPlatform™ supports any web or mobile application. Leverage your digital assets while integrating with existing sales, marketing and loyalty systems to extend the benefits of your online experience to your physical locations.

VERSATILE

The NVPlatform™ runs your application on any size screen, from tablets to video walls and everything in between. Choose the form factor that works best for your store layout and seamlessly integrate card readers, barcode scanners, and other device peripherals.

SCALABLE

The NVPlatform™ makes it easy to remotely onboard and activate new devices running your application. The web-based management tools and Spot Labs' procurement and installation systems allow customers to rapidly deploy any number of devices anywhere in the world.

RELIABLE

The web-based management tools enables maximum network uptime by providing real-time data on network health, such as signal strength, application activity, and CPU temperature. Users can configure, reboot, and capture real-time screenshots from any device from anywhere.

MANAGEABLE

Update all content within an application, and even the application itself, through the web-based management tools. Ensure campaigns are always relevant without changing hardware and target different content to different screens for robust optimization.

PRACTICAL

Flexible leasing options for hardware, creative services, installation and field service remove key budgeting barriers. Customers can create and deploy an entire network of devices with no upfront costs and one low monthly fee.
